INTERNATIONAL TOWERS INCORPORATED (ITI) PERFORMS INFRASTRUCTURE DESIGN/BUILD ON CBP's INTEGRATED FIXED TOWER PROGRAM (IFT)

Tucson, Arizona, July 12, 2016 - Tucson based International Towers Incorporated (ITI) announced that it is the tower Site designer and construction contractor supporting Elbit Systems of America, the prime Government contractor for the U.S. Customs and Border Protection's (CBP) Integrated Fixed Tower (IFT) Program. The Elbit Systems of America team has achieved customer acceptance of the initial Nogales, Arizona Area of Responsibility (AoR) and has begun deploying the second IFT AoR in Douglas, Arizona.

ITI designed, manufactured, and installed the fixed tower infrastructure for the IFT tower surveillance solution. The delivery of the system was made possible through seamless and intensive collaboration with the Elbit Systems of America Team and CBP. ITI President, Douglas J. Gratzner, acknowledges, "As a small business based in Tucson, Arizona, ITI is proud of the role we played in supporting Elbit Systems of America and U.S. Customs and Border Protection in successfully deploying the first IFT AoR in Nogales. This is a significant accomplishment."

The IFT system is provided by EFW Inc., a subsidiary of Elbit Systems of America, based in Fort Worth, Texas. "We have a history of success in providing integrated border security systems in some of the harshest environments across the globe," said Joel Friederich, vice president of Elbit System of America's Public Safety and Homeland Security business. "We are pleased with the IFT program success we have attained so far, and are grateful for the key role that ITI has played in supporting the program."

The IFT border security system is an integrated network of surveillance technology that is able to detect, identify, and classify items of interest (persons, vehicles, etc.) and allow CBP the ability to prioritize and determine resource allocations in order to respond to these detections.
